

Present your design and architecture

- Highlight the structure of your system or application.
- Emphasize the positive features of the design and architecture.

Discuss tradeoffs and design decisions

- Explain the tradeoffs made during the design process.
- Provide reasoning behind decisions that were not completely constrained.

Describe the implementation of the design

- Detail how the design was translated into code.
- Mention any technical challenges that arose.
- Explain how those challenges were overcome.

Explain your testing approach

- Describe how the system was tested.
- If applicable, explain how automated evaluation was done and what tools or frameworks were used.

Discuss scalability

- Describe how your design would scale to handle larger problems or more complex use cases if the project were expanded.
