

Test Documentation

Endpoint: Retrieve Submitted Assignments with File Validation

1. Feature Under Test

Retrieve all submitted assignments for a given assignment **and validate that each submission has a corresponding file stored on the server.**

Submissions without an associated file in the `SubmittedAssignment` directory are excluded from the response.

2. API Endpoint Details

Item	Description
HTTP Method	<code>GET</code>
Endpoint	<code>/submitted/assignments/{assignmentId}</code>
Authorization	JWT Bearer Token
Allowed Role	Lecturer
Input Parameter	<code>assignmentId</code> (integer)
Output	List of valid <code>Submitassignment</code> records

3. Preconditions

- User must be authenticated.
- User must have a valid JWT token.

- The `SubmittedAssignment` folder must exist on the server.
 - Database must contain submission records for the given assignment.
 - Uploaded files must be saved using the format:
`{SubmissionId}.pdf` (or configured extension).
-

4. Test Scenarios

Test Case 1: Valid Submissions with Existing Files

Description

Verify that the API returns all submissions that have corresponding files stored on the server.

Field	Value
Assignment ID	Valid
Submissions in DB	Yes
Files exist	Yes

Steps

1. Authenticate as a lecturer.
2. Send a GET request to `/submitted/assignments/{assignmentId}`.
3. Ensure submission files exist in `SubmittedAssignment`.

Expected Result

- HTTP Status: `200 OK`
 - Response contains a list of submissions.
 - Each submission has a corresponding file on disk.
-

Test Case 2: Submissions Exist but Files Are Missing

Description

Ensure submissions without files are excluded from the response.

Field	Value
-------	-------

Assignment ID	Valid
---------------	-------

Submissions in DB	Yes
-------------------	-----

Files exist	No
-------------	----

Steps

1. Authenticate as a lecturer.
2. Remove one or more submission files from the folder.
3. Send GET request.

Expected Result

- HTTP Status: **200 OK**
 - Response excludes submissions with missing files.
 - Only valid submissions are returned.
-

Test Case 3: All Files Missing

Description

Validate behavior when no submission files exist.

Field	Value
Assignment ID	Valid
Submissions in DB	Yes
Files exist	None

Steps

1. Authenticate as a lecturer.
2. Ensure all submission files are deleted.
3. Send GET request.

Expected Result

- HTTP Status: **404 Not Found**
 - Message: **"No valid submissions found (files missing)."**
-

Test Case 4: No Submissions Found

Description

Ensure correct response when no submissions exist in the database.

Field	Value
Assignment ID	Valid
Submissions in DB	No

Steps

1. Authenticate as a lecturer.
2. Send GET request.

Expected Result

- HTTP Status: `404 Not Found`
 - Message: `"No submissions found for this assignment."`
-

Test Case 5: Unauthorized Access

Description

Verify access is denied without authentication.

Field	Value
JWT Token	Missing or Invalid

Steps

1. Send GET request without token.

Expected Result

- HTTP Status: `401 Unauthorized`
-

Test Case 6: Invalid Assignment ID

Description

Verify API behavior with an invalid assignment ID.

Field	Value
Assignment ID	Invalid or Non-existent

Steps

1. Authenticate.
2. Send GET request using invalid ID.

Expected Result

- HTTP Status: 404 Not Found
-

5. Validation Criteria

- Only submissions with existing files are returned.
 - Database and file system consistency is maintained.
 - Unauthorized access is blocked.
 - Proper HTTP status codes are returned.
-

6. Notes / Future Improvements

- Store file extensions in the database for flexible file support.
- Implement automatic cleanup of database entries for missing files.
- Add logging for missing or corrupted files.
- Paginate results for large submission sets.
